EDUCATION

- Master of Engineering - Centrale Engineering School** (Nantes & Marseille Campuses) 2023 – 2027
 - Core curriculum in mathematics, physics, computer science, engineering fundamentals and project management.
 - Specialization in Information Systems, Artificial Intelligence, Machine Learning, and Digital Society.
 - Specialization in Virtual & Augmented Reality: C++, 3D graphics, image processing, real-time systems, applied machine learning and data visualization.
 - Additional coursework: Engineering for Heritage, Arts & Culture.
- Intensive Preparatory Program – Mathematics & Physics & Computer Science** 2021 – 2023
 - Intensive and highly selective two-year preparatory program in advanced mathematics, physics and computer science preparing students for competitive national engineering-school entrance exams.

EXPERIENCE

- Software Engineering Intern - Medical Imaging & AI - GE Healthcare**
2026 – Present | Buc, France (Greater Paris Area)
 - Developed an AI-driven web platform enabling radiologists to access patient information, generate clinical reports and interact with medical imaging
 - Built backend services integrating multiple medical imaging and diagnostic algorithms into a unified workflow
 - Contributed to user-facing functionalities allowing dynamic interface, metric computation, image-viewer interactions, and workflow automation through conversational prompts
- Software Engineering Intern - Météo France (French Meteorological Administration)**
2025 | Lannion, France
 - Developed a web platform automating satellite data-processing requests, reducing manual operations for meteorological model preparation.
- Technical Operations Intern - 40Watts**
2024 | La Gacilly, France
 - Assisted technicians in refurbishing electric bicycle
 - Contributed to the definition of future IT projects by drafting functional requirements and specifications for web and software initiatives

PROJECTS

- VR Maxillofacial Rehabilitation Application** 2026
 - Developed a virtual reality rehabilitation application using gamification principles to support maxillofacial therapy
 - Integrated personalized MetaHuman-based avatars and interactive facial-movement exercises to improve patient engagement
- VR Tower Defense Game – Laval VR Hackathon - Winner (1st Place)** 2026
 - Developed a virtual reality tower defense game where players deploy personalized animated avatars as defensive units
- Generative AI Project** 2025
 - Developed a generative AI model based on NanoGPT capable of creating video game levels from user prompts in real time
 - Built the dataset, trained the model, and integrated the complete solution into a custom game engine

LANGUAGES

French Native Speaker	English Professional proficiency (C1)	Spanish Intermediate (B1)
---------------------------------	---	-------------------------------------

SKILLS

Programming Python - C - C++ - Java - JavaScript - OCaml - SQL - Git	Web & Backend HTML - CSS - React - Node.js - Express - Flask
AI & Data LangChain - Machine Learning - LLM Integration - Pytorch	3D, Graphics & XR OpenGL - Unity - Unreal Engine - OpenCV

ACTIVITIES

Association Organized a week-long student trip for 45 participants (logistics, scheduling)	Sports Running - Climbing - Competitive Pétanque	Interests Personal software projects - Reading - Strategy Game
